

Legacy TBM:  
Smart Way to Improve the Safety with **a Clever Upgrade**

## Daher launches the G600 TXi avionics retrofit to modernize the Flight Deck of the TBM Legacy.

*A modern cockpit is key to further improve the flight safety by providing an optimum situational awareness –*

*THROUGH THE LATEST STATE OF THE ART TECHNOLOGY.*

*As part of the Daher's strategy of the continuous improvement efforts for its aircraft families, the cockpits of TBM aircraft have evolved with the introduction of new avionics suite.*

*This is also true for the legacy aircraft, underscoring the company's commitment to the entire Daher aviator community – as reflected by the launch of Garmin G600 TXi avionics upgrades for TBM 700s & TBM 850s.*

*The G600 Txi delivers a cost-effective upgrade to touchscreen flight displays that deliver advanced PFD/MFD/EIS capabilities and a fully integrated glass cockpit suite for the early-produced TBMs.*
